## 1.1 System Domain

The Furniture Store System is designed to facilitate users' online purchase of furniture products. It includes a user-friendly interface for browsing various furniture items, managing user accounts, making purchases, and handling order fulfilment. Customers browse the website, search for furniture, add items to the shopping cart, and make purchases. Administrators or managers are responsible for overseeing and maintaining the system.

In addition to providing a seamless online purchasing experience, the Furniture Store System incorporates robust inventory management functionality. This aspect ensures that the online catalog is synchronized with the physical stock, preventing discrepancies and inaccuracies. Inventory management includes tracking product availability, managing restocks, and updating the online platform in real-time. This feature is crucial for maintaining a reliable and up-to-date representation of the available furniture products, ultimately contributing to customer satisfaction and operational efficiency.

Furthermore, the system includes a secure user authentication and account management system. This allows customers to create accounts, store their preferences, track order histories, and receive personalized recommendations. User accounts not only enhance the shopping experience but also contribute to the implementation of targeted marketing strategies. Additionally, the system ensures the security of sensitive user data, employing encryption and authentication protocols to safeguard personal information, thereby instilling trust in the online platform.

## 1.2 Requirements Specifications

### *Glossary*

Term	Definition
Admin	The admin is the one who owns the system and has no restrictions to do anything, and he is responsible for it.

User	The user is the person who has access to the system but as a customer and doesn't have any access to the main system as the admin.
Shipping company	The shipping company are the people who deliver the product that we provide to the user and as known they will have access but for their part only to add information and update it as well.

Table 1.1: Glossary

### 1.2.2 Functional Requirements Specification

- User can add items to shopping cart to proceed for purchase.
- User must add payment method to complete the purchase.
- User must have an account for the system to store the information.
- User must add his information as the phone number/email address/name/age/address/payment method.
- User can manage their profile.
- User can make a checkout.
- User can add, view, edit and delete items from the cart.
- System must accept and verify each user.
- System must send an email to the user to arrange the shipping process.
- Administrator can view/remove users from the system.
- Administrator can add, delete or edit products.
- Administrator can manage the backup-restore data for the products.
- Administrator can cancel an order if needed.

### 1.2.3 Non-Functional Requirements

- System should be secured.
- The system should be easy without any complications for the process or the interface.
- The system should be fast and responsive.

- System should be designed to serve a minimum of 10,000 users at the same time.
- System should be updated or compatible with new versions as soon as possible.
- System should have regular automated backup process from time to time.
- The system should be easily scalable to accommodate a 20% increase in the number of products and users within the next two years.
  
- System shall have a 99.9% uptime over a 30-day period, excluding scheduled maintenance.
  
- User authentication shall follow industry best practices, including strong password policies and secure transmission of sensitive information.
  
- System shall have built-in performance monitoring tools to track key metrics such as response time, error rates, and system resource usage.

## 1.3 Unified Modeling Language (UML)

### 1.3.1 Use case modeling.

#### 1.3.1.1 Use case description.

#### 1. User Register:

<b>Function</b>	Register user
<b>Description</b>	User inputs information to register and to be able to add and remove items to the cart and purchase products from the website.
<b>Input</b>	User will fill his personal information: First Name, Last Name, Mobile Number, Home telephone number, Work Telephone Number, Fax, E-mail (for login and to contact this user through), password, date of birth, occupation, nationality, and gender.
<b>Output</b>	If the process is valid, the user will see successful message, and if the process not valid, the user will see error message tell him the wrong data which he entered.
<b>Action</b>	If the user is a new user, he can register in the website. The website displays a registration page and asks the user to enter personnel information (first name, last name, and phone number, email address and password) and then confirm his password and select the security question then he answers it and finally write the spam characters. admin will confirm registration. If there is invalid information the

	system will not complete the registration and will display a warning message telling the user to modify the information.
<b>Pre-condition</b>	A database to save the credentials
<b>Post condition</b>	Account activation and email validation from user

## 2. Log in:

<b>Function</b>	Log in
<b>Description</b>	User inputs his username and password if he's registered
<b>Input</b>	Input username, email address and password
<b>Output</b>	If the credentials are right, the user will pass to the next page, if they were wrong, the user will get an error message
<b>Action</b>	The user (User/Admin) can login to the website by entering his email address and password. The system will verify that the email address existed in the database and matches the login password. If they do not match, an error message will be shown, asking the user to correct his information. Then the user/company user can access his account.
<b>Pre-condition</b>	- A Connected database - A registered and activated user account.
<b>Post condition</b>	Browse the website

## 3. Log out:

<b>Function</b>	Logout
<b>Description</b>	Registered user when they want to close the session with the website, then click logout
<b>Input</b>	Click on logout button
<b>Output</b>	Redirect to another page contains message said the user logged out and the session is expired.
<b>Action</b>	Users or admin can log out from the website by clicking on the logout button.
<b>Pre-condition</b>	Successfully Login.
<b>Post condition</b>	None

## 4. Add item (Admin)

<b>Function</b>	Add item
<b>Description</b>	The admin user can add new item for sale to the website
<b>Input</b>	Enter the new Item Details (name, color, price, photos....)
<b>Output</b>	Returns message (Your data successfully updated) and views it.
<b>Action</b>	The admin can add a new product and describe this product in detail like name, color, price, photos, dimensions, material, available in which branch and quantity.
<b>Pre-condition</b>	Successfully logged in

<b>Post condition</b>	The new entered product will be available for all users
-----------------------	---

## 5. Activate account

<b>Function</b>	<b>Activate account</b>
<b>Description</b>	After successfully registration process the user will receive activation Email
<b>Input</b>	Only click the activation link
<b>Output</b>	Message (Your account Successfully activated)
<b>Action</b>	After successfully registration Process the user will receive Activation Email, he should go to his Email and click the activation link to activate his account, and if not clicked within 3 days, the account will be canceled and deleted from the database
<b>Pre-condition</b>	Successfully registration
<b>Post condition</b>	Account activated

## 6. Edit item (Admin):

<b>Function</b>	Edit item
<b>Description</b>	The admin user can edit an existing item for sale in the website.
<b>Input</b>	Enter the new Item Details (name, color, price, photos....)
<b>Output</b>	Returns message (Your data successfully updated) and views it.
<b>Action</b>	The admin can edit an existing product and describe this product in detail like name, color, price, photos, dimensions, material, available in which branch and quantity.
<b>Pre-condition</b>	Successfully Login and previous products were added to his account to be updated
<b>Post condition</b>	Message that the new information successfully saved

## 7.Delete item (admin):

<b>Function</b>	Delete item
<b>Description</b>	The admin user can delete items from the website.
<b>Input</b>	Enter the new Item Details (name, color, price, photos....)
<b>Output</b>	Returns message (Your data successfully updated) and views it.
<b>Action</b>	The admin can delete an existing product
<b>Pre-condition</b>	Successfully Login and previous products were added to his account to be updated
<b>Post condition</b>	Message that the new information successfully saved

## 8.Update User Information

<b>Function</b>	Update Information
<b>Description</b>	Any user can view to his own profile and update any of his Information
<b>Input</b>	Enter the new updated data
<b>Output</b>	Message “Your Data Successfully Updated”
<b>Action</b>	After successfully login process the user will click on (Update Profile) the system will display the information to be updated and the user enter the new data.
<b>Pre-condition</b>	Successfully login
<b>Post condition</b>	A message to tell the user that his data is updated successfully. or Login again if update username or password

## 9 .Browse product

<b>Function</b>	Browse product
<b>Description</b>	Any user can view any of the products.
<b>Input</b>	None
<b>Output</b>	Browse Information of all products
<b>Action</b>	Users can view products details (description, photos, and models) according to categories.
<b>Pre-condition</b>	Connected database and Existing Products
<b>Post condition</b>	Items displayed by the system

## 10.Search items

<b>Function</b>	Search items
<b>Description</b>	Users can search on any of the saved products.
<b>Input</b>	Type the required Item
<b>Output</b>	Browse all products that are related to the keyword entered.
<b>Action</b>	Users will be able to search for anything in the system database by typing any keyword in a search textbox then the system will return the matched items or a message.
<b>Pre-condition</b>	None
<b>Post condition</b>	The result of search or perform for new search

## 11.Add product:

<b>Function</b>	Add product
<b>Description</b>	The user can select and add the products to the cart to buy it.
<b>Input</b>	Click on the add-to-cart button which appears at the bottom of every product.
<b>Output</b>	The cart will increase by the selected products in the header of the page

<b>Action</b>	The user can select any product from the cart to buy it.
<b>Pre-condition</b>	The user must be logged in first to be able to add the product to the cart
<b>Post condition</b>	Send e-mail to the user and the company users to make the communications and to arrange the way of paying and delivering the products

## 12.Delete product:

<b>Function</b>	Delete product
<b>Description</b>	Any user can delete product from shopping cart
<b>Input</b>	Type product to be removed
<b>Output</b>	product removed from shopping cart
<b>Action</b>	Users able to remove items from Shopping cart, that may be added by mistake
<b>Pre-condition</b>	There are products in Shopping cart
<b>Post condition</b>	product deleted

## 13.View Cart:

<b>Function</b>	View Cart
<b>Description</b>	The user can view his added products by clicking on the view shopping cart button in the header of the home page on the website.
<b>Input</b>	Click on the view shopping cart button in the header of the home page on the website.
<b>Output</b>	Redirect to shopping cart page which contains the selected products
<b>Action</b>	The user will be able to view his added products by clicking on the view shopping cart button in the header of the home page on the website.
<b>Pre-condition</b>	The user must be logged in first and select any product
<b>Post condition</b>	None

## 14.Add Address:

<b>Function</b>	Add address
<b>Description</b>	The user will add the shipping address to be saved into his account before making a purchase, which is needed by the shipping company to use to send the user the product
<b>Input</b>	Before making the purchase, the user will input the shipping address which contains the street, area, city, and country
<b>Output</b>	A message will be shown (Address saved successfully)

<b>Action</b>	The user will be able to buy products from the website now that they added an address to their account, now the products they buy will be sent to their home address.
<b>Pre-condition</b>	The user must be logged. Account must be activated
<b>Post condition</b>	The user can buy products from the website.

### 15.Add Payment

<b>Function</b>	Add Payment
<b>Description</b>	The user can add a payment card (credit card, visa, ..).
<b>Input</b>	Click on the payment button on the website and add payment information
<b>Output</b>	Check validation for payment card
<b>Action</b>	The user will be able to add payment card and website will validation payment information
<b>Pre-condition</b>	The user must be logged to the website
<b>Post condition</b>	Payment information added

### 16.Checkout items

<b>Function</b>	Checkout items
<b>Description</b>	The user can check out by click on the checkout button
<b>Input</b>	List of added items at the cart.
<b>Output</b>	Orders will be sent to the user.
<b>Action</b>	When the user finishes shopping, he requests to checkout. The user is given the option to edit, add or delete any of the items included in the order. And verify the user information, and then an email will be sent to the company with all the details of the requested items and the user information.
<b>Pre-condition</b>	- User must be logged in first. - Account must be activated - Items must be added first to the shopping cart.
<b>Post condition</b>	The checked-out items will be deleted from the cart.

### 17.Return product

<b>Function</b>	Return product
<b>Description</b>	The user will return product that be shipped to him
<b>Input</b>	The user buy product and shipped to him
<b>Output</b>	A message will be shown (return order requested successfully)

<b>Action</b>	The user will be able to buy products from the website and able to return the product if is wrong item or issues with 14 days (about 2 weeks) with free fees
<b>Pre-condition</b>	The user must be logged. The user must have issues with product or wrong product
<b>Post condition</b>	The shipping company will return product to warehouse

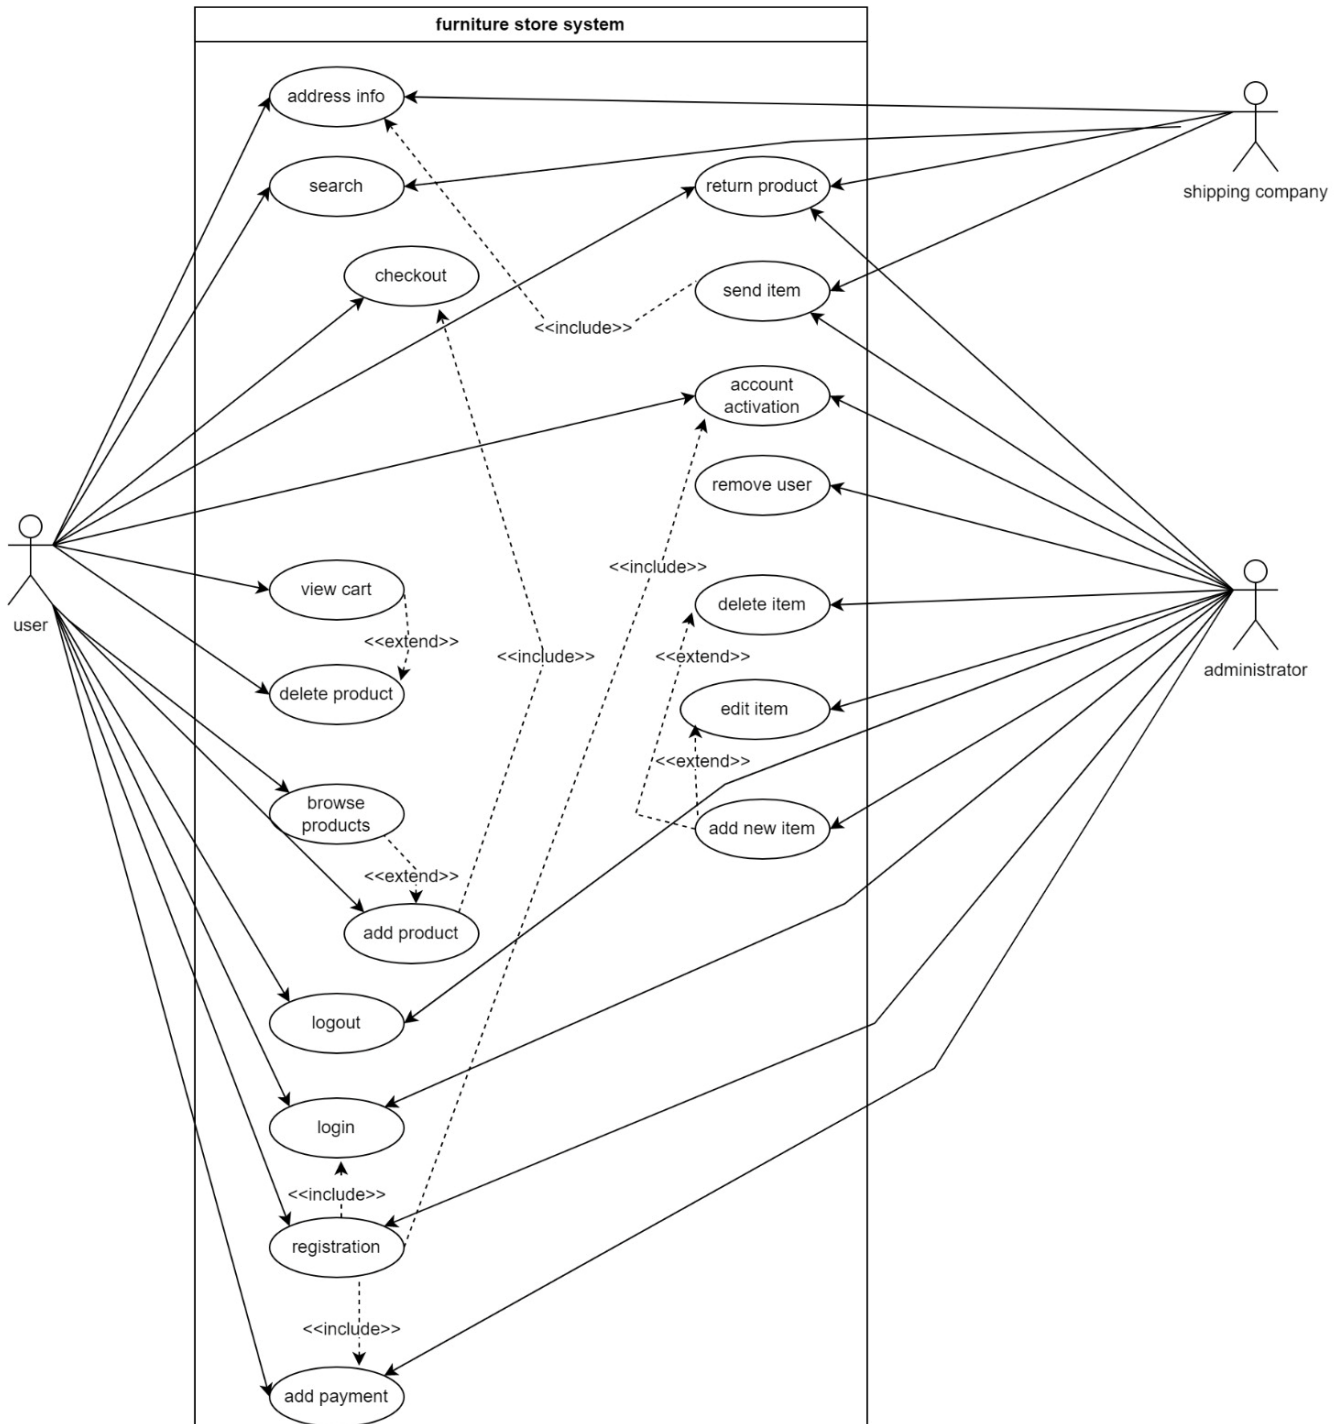

#### 18.Delete User (Administrator)

<b>Function</b>	Delete user
<b>Description</b>	The administrator can remove any user whatever a user or a company user.
<b>Input</b>	Search for the user and click on remove button
<b>Output</b>	Check validation for payment card
<b>Action</b>	The administrator can remove any user and he will see a confirmation message before the removal process, after that he chooses to go through with it or cancel, so if he chooses to proceed the user is removed and if he chooses to cancel the operation will be aborted.
<b>Pre-condition</b>	The administrator must be logged in and the user must be registered in the database.
<b>Post condition</b>	Confirmation message before the removal process.

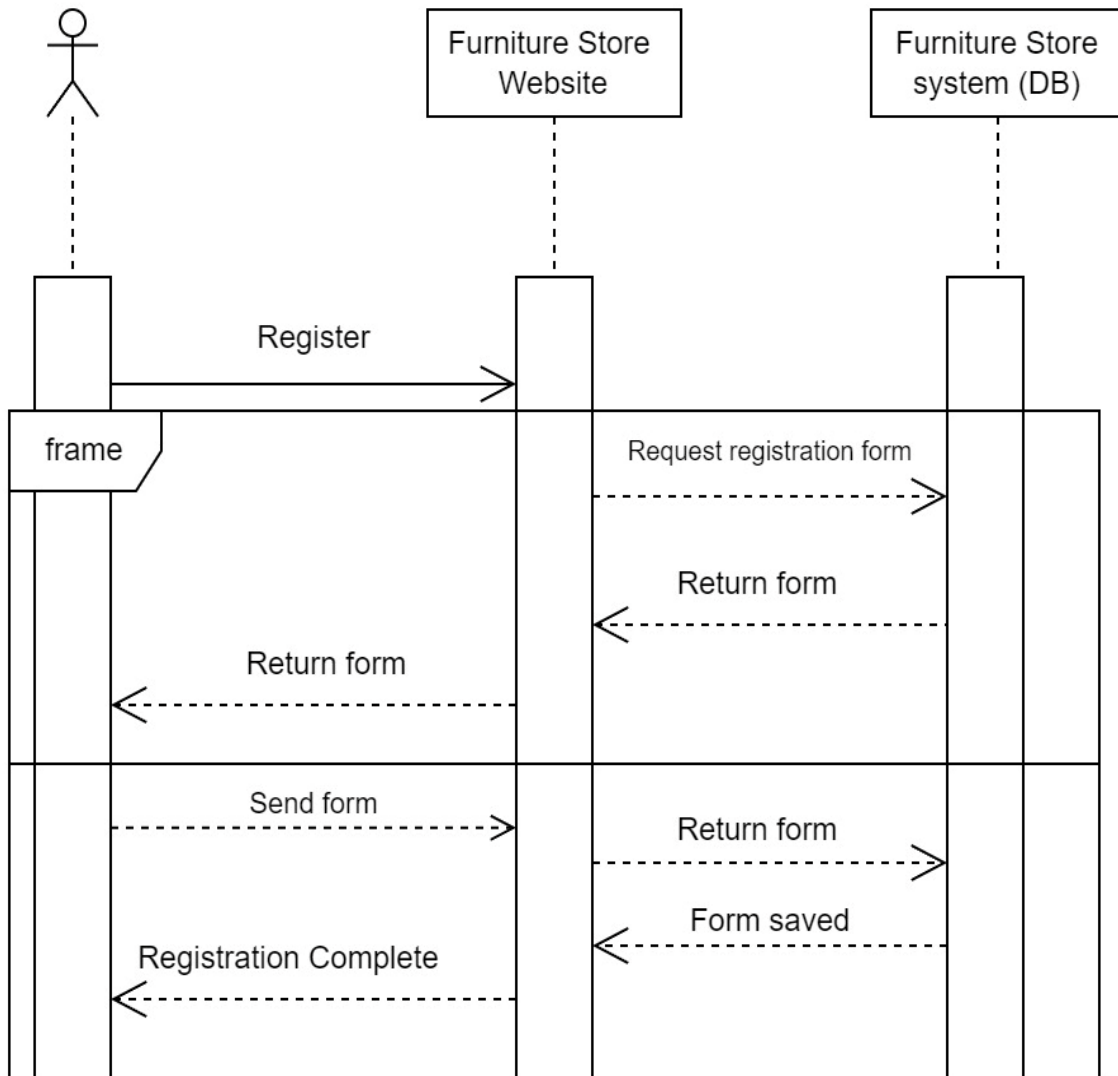

#### 19.Send product

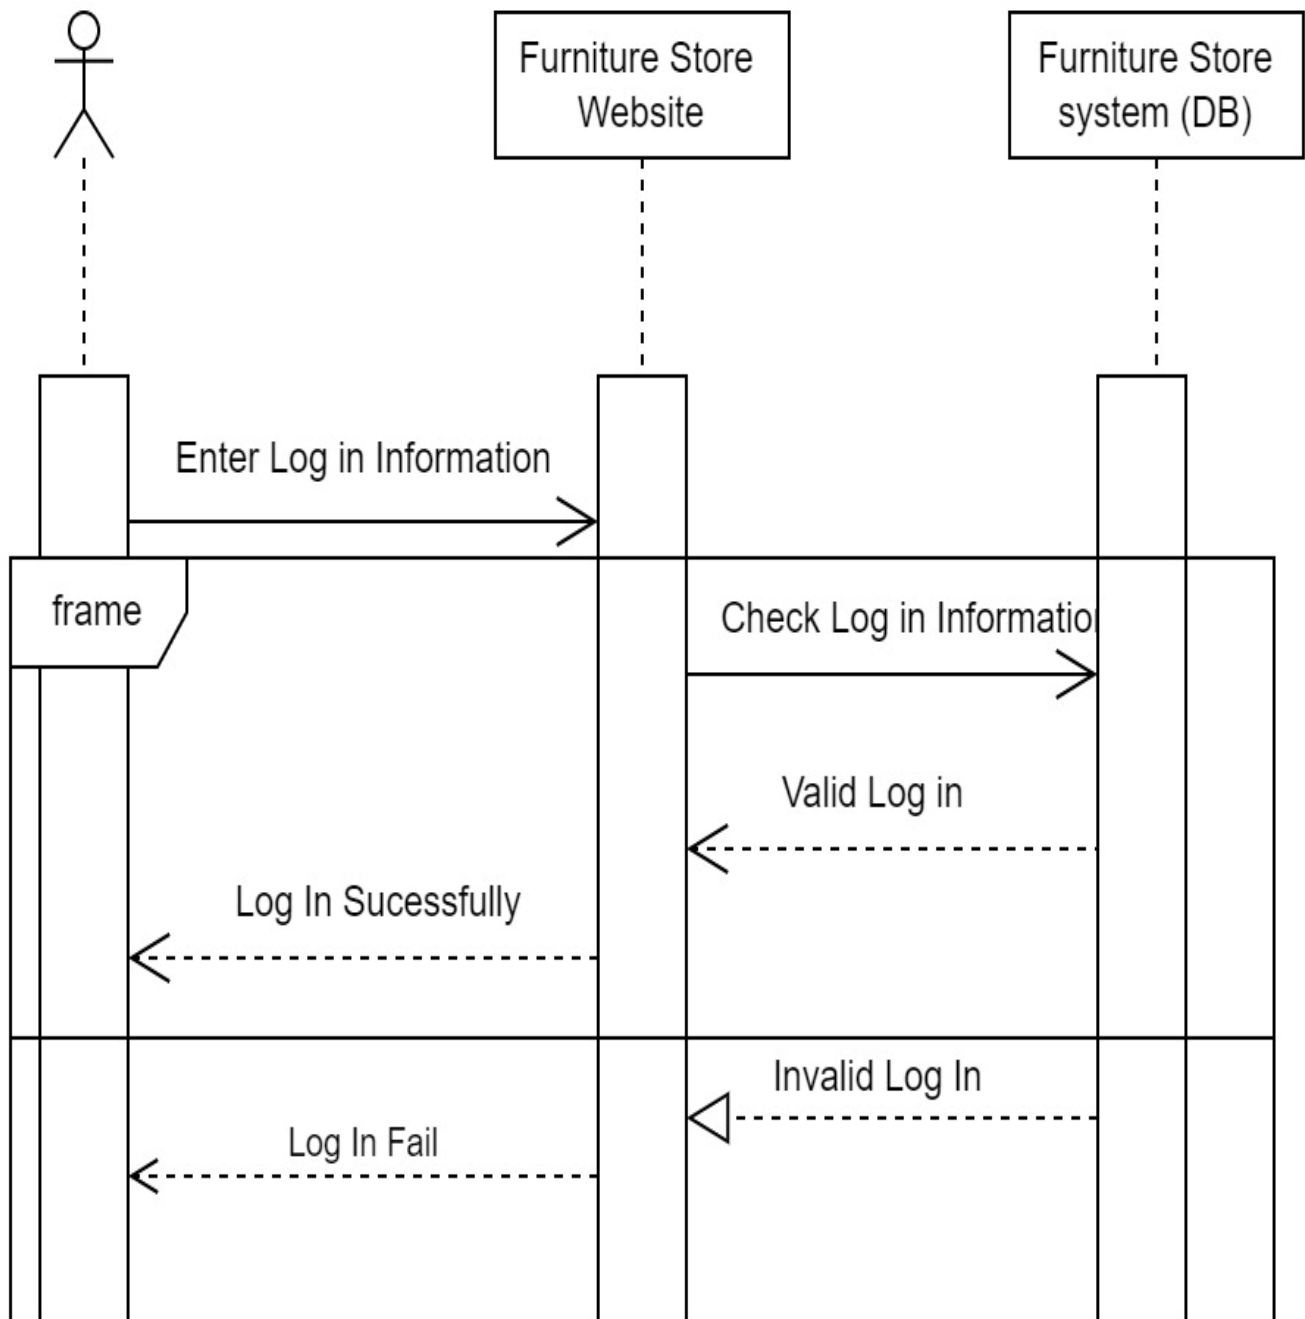

<b>Function</b>	Send product
<b>Description</b>	The system send order to shipping company to ship the order
<b>Input</b>	The user buy product
<b>Output</b>	A message will be shown (order submitted successfully)
<b>Action</b>	The user will be able to buy products from the website and website will send order to Shipping company to ship order
<b>Pre-condition</b>	The user must be logged. The user must buy product
<b>Post condition</b>	The shipping company will ship product to user
